

Linkyfi is designed to have a captive Portal that is Both friendly to Desktop and Mobile Users. This Means Users on a Desktop device will view the Captive Portal in the middle of their screen

Linkyfi Won't Change the Aspect Ratio of the images you upload. This is to prevent "Stretching" or "Cropping" of an image.

When you Design a Captive Portal and you want to upload a Certain Image that Contains Text \ Smaller Images ,we recommend using an Aspect Ratio of

1. 4:3 – 300x250 or Higher (Image size)
2. 16:9 (Depends on the amount of "sub Pictures and Text) 1600x900 \ 1920x1080
3. 1:1 Can also be used in Certain scenarios 400x400 or Higher (Depending on image size)

If you are working on an image but it isn't the image source you can't change the aspect ratio of it without cropping or stretching the image.

Also take into consideration of the total image(s) sizes. Before a Customer gets presented with an Captive portal the end device will need to load the whole page.

We recommend using Images/videos <2MB. Linkyfi Supports most image Formats (We Recommend Either .jpg or .png (including transparent support))

When you create an Slideshow on Linkyfi it is best practise to keep all the images locked to the same aspect ratio , they can however have different resolution sizes \ image sizes as long as the aspect ratio is the same)

https://andrew.hedges.name/experiments/aspect_ratio/ has a nice calculator. (Most Photo Editing Software has this built in though)

The following Website + Image is a preview you can use to view all the different aspect ratios
